

JESIN MILESH M

B.E. CSE (Cyber Security) Student

+91 7418431480 | jesinmiles61@gmail.com | Nagercoil, Tamil Nadu | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL OBJECTIVE

Motivated Cyber Security student (CGPA: 9.06) skilled in Python, and network security with practical experience building security-oriented tools and management systems. Demonstrated ability to work with Nmap and OS-level subsystems for threat detection and behavioral tracking. Actively seeking an internship to contribute to real-world security operations and deepen hands-on expertise.

EDUCATION

B.E. Computer Science & Engineering (Cyber Security Specialization)

2024 – 2028

Prathyusha Engineering College, Tamil Nadu **CGPA: 9.06**

TECHNICAL SKILLS

Languages: Python, Java, C, SQL, HTML, CSS, JS(Basic)

Databases: MySQL, SQLite

Security Tools: Nmap, Wireshark, Burpsuite, Zphisher, Phonesploit, Gophish, Seeker, Villan, Jhon the Ripper, Subfinder, Gobuster

OS / Platforms: Linux (CLI), Windows, Kali, Ubuntu, Fedora

Concepts: Network Security, Vulnerability Assessment, Ethical Hacking, SOC Fundamentals

Other: Git, tkinter, AWS Cloud Fundamentals, GenAI Developer(Build intelligent applications with Generative AI and LLMs)

PROJECTS

Automated Network Log Intelligence & Threat Analysis

- Built a desktop application for real-time network log monitoring, threat detection, and behavioral analysis.
- Non-blocking network scanning via Python threading; OS-level data collection using subprocess (netstat, wevtutil).
- Regex-driven log parsing, CSV export, and time-series behavioral tracking with collections & datetime modules.
- Hardware-level audio alerts via winsound for immediate incident notification; GUI built with tkinter.

Employee Management System

- Developed a full-stack desktop application to manage employee records with CRUD operations and role-based access.
- Designed normalized relational schema in MySQL; integrated with Python backend for secure data transactions.

Inventory Management System

- Built an inventory tracking system with automated stock alerts, search/filter functionality, and report generation.

Account Registration System

- Implemented secure user registration with input validation, password hashing, and duplicate-entry prevention.

Keylogger Simulation

- Developed a controlled keylogger simulation to understand keystroke capture, event monitoring, and endpoint security concepts. Implemented secure logging and analysis in a lab environment to study detection techniques and cybersecurity risks.

Password Strength Evaluation

- Developed a password strength evaluation tool to analyze passwords based on length, complexity, character diversity, and common security patterns. Provides real-time strength feedback and recommendations to encourage stronger password practices.

Hash Generator

- Developed a tool to generate cryptographic hashes from user-provided input using algorithms such as SHA-256 and MD5. Demonstrates password hashing, data integrity, and basic cryptographic concepts.

Caesar Cipher

- Developed an encryption and decryption tool using the Caesar Cipher technique. Demonstrates fundamental concepts of classical cryptography, substitution ciphers, and key-based text transformation.

Base64 Encoder

- Developed a tool for encoding and decoding text using Base64 representation. Demonstrates data encoding concepts and conversion of binary/text data into a transferable string format.

CTF Organizer & Challenge Designer

- Designed, deployed, and maintained offensive security challenges for XploitX, a cybersecurity event held in 2026. Managed event infrastructure including CTFd platform setup and participant support.

CERTIFICATIONS & ACHIEVEMENTS

- AWS Educate: Introduction to Cloud Computing 101 — Amazon Web Services
- WIFI Pentesting — Cappriciosec University
- Python Programming — NICEDT
- Hack with India Hackathon — Microsoft (participant)
- Codeathon 3.0 — National Level Hackathon (participant)
- Getting Started with Cisco Packet Tracer — Cisco Networking Academy
- Introduction to Cyber Security — Cisco Networking Academy
- Evil Corp CTF – Nexplot Security Operations
- Nexora Hackathon – Hackhere (participant)
- Code of Thrones - National Level Hackathon (participant)
- Cyber Security Workshop – National Level Technical Symposium

SOFT SKILLS

- Analytical & Critical Thinking
- Attention to Detail, Self-Directed Learning
- Team Collaboration, Effective Communication
- Time Management, Problem Solving
- Leadership, Adaptability

AREAS OF INTEREST

- Security Operations Center (SOC)
- Network Security
- Cloud Security
- Full Stack Developer
